Rachit Tyagi

Senior Full Stack Engineer · Angular · React ·
Node.js · .NET · Cloud & AI Assisted Systems

torachitkumar@gmail.com +91-75992-88242 linkedin.com/in/tyagirachit

SUMMARY

- 14+ years of experience architecting and delivering enterprise-grade SaaS ERP applications serving thousands of corporate (B2B) customers across travel, distribution, and operational platforms.
- Strong expertise in MEAN and MERN stack architectures, along with modern .NET Core ecosystems, designing scalable API-first, microservices-driven, multi-tenant systems.
- Hands-on architect experienced in containerized development environments, cloud-native deployments, CI/CD enforcement, and DevSecOps practices.
- Extensive experience using AI tools for development workflows including code generation, architectural validation, DevSecOps reviews, automated refactoring, and structured output validation.
- Currently working in a high-quality engineering environment with multiple layers of AI-assisted and human code reviews, strict pull request governance, coverage enforcement, and production observability standards.
- Strong focus on performance, reliability, tenant isolation, security hardening, and long-term maintainability of SaaS platforms.

TECHNICAL KNOWLEDGE

- **Frontend Architectures:** Angular, React, TypeScript, RxJS, Vite, SPA architecture, dynamic form systems, role-driven UI rendering
- **Backend Architectures:** Node.js (Express, Fastify), ASP.NET Core, RESTful APIs, microservices, event-driven patterns
- **Full Stack Ecosystems:** MERN, MEAN, .NET + Angular enterprise stacks
- **Databases:** PostgreSQL, MySQL, MariaDB, MongoDB, MS SQL Server

(multi-tenant schema design & performance tuning)

- **Containerized Development:** Docker multi-stage builds, Docker Compose, local container orchestration, image optimization, environment parity strategy
- **Cloud & DevOps:** AWS, Azure, GitHub Actions, CI/CD enforcement, infrastructure-aware deployments
- **Security & DevSecOps:** OAuth 2.0, JWT, RBAC, secure API gateways, dependency audits, secure SDLC practices
- **Observability & Quality:** Sentry, Coveralls, code coverage enforcement, structured logging, production debugging workflows
- **AI-Augmented Engineering:** OpenAI APIs, structured LLM outputs, GitHub Copilot, Antigravity, Ellipsis, Junie, AI-assisted PR reviews, AI code audits
- **Governance & Engineering Standards:** Multi-layer PR reviews (AI + Human), linting enforcement, automated policy checks, enterprise branching strategies

PROFESSIONAL EXPERIENCE

TravelNet Solutions India, Chennai

Jan 2024 – Present

Technical Architect

- Leading architecture and development of large-scale SaaS ERP modules supporting thousands of B2B corporate clients across travel and distribution ecosystems.
- Designing multi-tenant, role-driven, API-first backend systems using Node.js and ASP.NET Core with strict tenant isolation and audit compliance.
- Architecting Angular and React frontends with dynamic configuration-driven UI, permission-based rendering, and enterprise-grade performance optimization.
- Driving containerized development strategy using Docker multi-stage builds and environment parity across local, staging, and production systems.
- Enforcing DevSecOps workflows including automated CI/CD pipelines, coverage gates, Sentry-based production monitoring, and structured logging.
- Integrating AI-assisted engineering workflows using GitHub Copilot, Antigravity, Ellipsis, and AI-based PR validation to improve productivity and defect detection.

- Participating in multi-level review processes involving AI-based static analysis, automated compliance checks, and senior architectural human reviews before production releases.
- Leading system modernization initiatives and reducing regression defects through structured review pipelines and governance standards.

BrainVault Technologies Pvt Ltd, Chennai

Apr 2022 – Dec 2023

Technical Architect

- Architected scalable enterprise web applications using Angular and React with modular, reusable design systems.
- Designed Node.js microservices architecture with clean layering, validation schemas, RBAC enforcement, and production observability.
- Built AI-powered features leveraging OpenAI APIs with structured validation, response normalization, and business rule enforcement.
- Introduced containerized development and standardized CI/CD pipelines across repositories.
- Led architectural reviews and mentored senior engineers on system design and performance optimization strategies.

DecisivEdge Technology Service India Pvt. Ltd., Pune

Sept 2016 – Mar 2022

Senior Software Engineer

- Developed high-traffic enterprise web applications using Angular and .NET technologies.
- Automated deployment workflows, reducing manual operational effort by 40%.
- Migrated legacy systems to modern architectures, improving application load times by 50%.

Inventra Tech Pvt Ltd., Noida

May 2015 – Aug 2016

Software Engineer

- Developed recommendation engine features for travel platforms, improving user engagement.
- Contributed to microservices-based system designs to improve scalability.

Earlier Experience

- **NTPC Ltd., Noida** – Software Engineer | Nov 2014 – Apr 2015
- **Velocity Software Solutions Pvt. Ltd., Noida** – Software Engineer | Mar 2013 – Oct 2014
- **Xelite Infocom, Cochin** – Software Engineer | Jul 2012 – Feb 2013

ACADEMICS

- **B.Tech. (Computer Science)**, Gautam Buddha Technical University, Lucknow – 2012
- **Senior Secondary School**, CBSE Delhi – 2008
- **Secondary School**, CBSE Delhi – 2006
